ONE PAGE NOTE

URBAN DESIGN IMPROVEMENT PLAN FOR PANEER SELVAM PARK AREA AND PERIYAR NAGAR IN ERODE CITY MUNICIPAL CORPORATION

OBJECTIVE OF THE PROJECT

- To provide better facilities for sustainable modes such as walking, cycling, and public transport.
- To provide a holistic approach to street design, incorporating mobility elements - e.g. footpaths, cycle tracks, and carriage ways-as well as additional elements such as trees, bus stops, street furniture and organised vending spaces in an integrated design.
- To ensure that street design is based on scientific assessment of needs and behaviour of street users, as observed in the surveys as part of this study.

NEED FOR MODEL CITY

The Erode City Municipal Corporation faces several challenges due to lack of application of urban design concepts to the urban infrastructure process. This has resulted in congestion as well as safety hazards for its citizens. An illustrative example may be the planning of footpaths in the Cities. The footpaths are mostly narrow with utilities like Electrical Posts and other infrastructure preventing free movement of users. The activities of the ULBs in improving urban design have been limited. In this respect, the model city need to support the urban expansion through proper planning of urban areas leading to better comfort for the citizens. The preparation of urban design improvement plan, thus aims to incorporate urban design concepts and detailing specific projects for the selected specific area in Erode. The specific area shall incorporate best practices in urban design, mobility and open space management. The plan shall be prepared in line with the environmental and social management framework of World Bank.

PROPOSALS

The urban design improvement plan shall include an intelligent road system and a series of strategies for key elements in the public including:

- Improvements of Roads surface and culverts
- Footpath with utilities service zone
- Storm water drain and proper connectivity Ducting for all service infrastructure lines
- Underground cabling
- Signage
- Sidewalk
- Lighting
- Pedestrian crossing
- Roadside open space development
- Road/street furniture
- Junction improvement
- Cycle Lane
- Vehicle Parking
- Bus Stops
- CCTV Camera
- Provision for tubular or box advertisements in potential areas
- Public art, public amenities like public playground and washrooms
- Street landscaping, Green cover along the roads & Greenery with provision of facilities for watering plants and rainwater harvesting.

OUTCOME

Model City plan for Erode will increase the Standard of living for the people of Erode. The travel experience of the public and private vehicle commuters will change due to the good Traffic Management. And the Pedestrians will also have a dedicated side-walks and facilities to have a safe and comfortable commuting. There will be an increase in Green and Open space for the planning area.
